

## ***TJ Gas Tank Skid Plate (GTSPT) Installation Instructions***

This skid plate was designed to fit **OVER** the existing gas tank skid plate on the Jeep TJ models with a 19-gallon tank.

1. Starting at the rear of the Jeep, remove one nut at each end of the OEM skid plate.
2. Move to the front of the OEM skid plate and remove two nuts.
3. Install the bracket using OEM nuts with one arm pointing down and one arm pointing towards the differential. Leave the nuts loose.
4. Connect the front of the gas tank shroud to the bracket with the nuts and bolts provided in the kit. ***Point the bolts out towards the front of the Jeep.***
5. Push up the gas tank shroud and connect it with the two outside OEM nuts on the rear.
6. Tighten ALL nuts and bolts to factory specifications.

### ***Helpful Hints:***

The gas tank shroud may need some fine tuning. A rat tail file should be all you need to open up a bolt hole. You may also need a floor jack to fit the shroud up snug against the OEM skid plate.
